

HW1

Wednesday, August 26, 2015 12:14 AM

1. Use an FTP program to retrieve a file from a remote site.

a. If the server does not provide statistics, estimate the transfer rate for a large file. If the server does provide statistics, use the provide statistics to state the transfer rate.

Status: Starting download of /media/Bloodborne/Bloodborne/01 Omen.mp3

Status: File transfer successful, transferred 5,077,252 bytes in 2 seconds

Transfer Rate: 2538.626 kbps

b. Is the rate higher or lower than you expected?

Higher.

c. Why do you think it this was the case?

The FTP Server has fast download speeds and the internet connection download speed is reportedly 25mbps.

d. Why is the transfer rate important to the developer of the application?

Specifications are important to know what the target system is capable of during development. You wouldn't want to develop for a bitrate that is not possible to achieve during production or on that particular server! This is an example of requirements gathering.

2. Are the following standard application protocols connectionless or connection-oriented?

a. Telnet - connection oriented

b. FTP - connection-oriented

c. SMTP - connection-oriented

d. NFS (Network File System) - can be either connectionless or connection-oriented

e. HTTP - connection-oriented
